DETAILED ACTION

Election/Restrictions

1. Restriction to one of the following inventions is required under 35 U.S.C. 121:
 - I. Claims 1-60, 93-96, drawn to a method of detecting a primary amino acid, spatial array, classified in class 435, subclass 6.
 - II. Claims 61-92, 97-102, drawn to microfluidic amino acid analysis system, microtiter plate kit, classified in class 435, subclass 306.1.

2. The inventions are distinct, each from the other because of the following reasons:

Inventions I and II are related as process and apparatus for its practice. The inventions are distinct if it can be shown that either: (1) the process as claimed can be practiced by another materially different apparatus or by hand, or (2) the apparatus as claimed can be used to practice another and materially different process (MPEP § 806.05). In this case, Invention I can be practiced by another materially different apparatus such as reverse-phase chromatography with precolumn derivatization with various reagents.

Because these inventions are distinct for the reasons given above and the search required for each group is not required for the other groups, restriction for examination purposes as indicated is proper.
